

# Resilience for the Digital Frontier

**Helping you focus on business outcomes, not cybersecurity metrics**

**Your greatest financial exposures**

**Your real-world cyber threats**

**How attacks are likely to occur**

**Minimizing likelihood/impact of a breach to an acceptable level**

*Cyber RiskScope key risk indicators help business leaders visualize and manage cyber risk.*

**Cyber RiskScope®** is a portfolio of cyber risk management solutions enabling business managers to make risk-based decisions by providing critical insight into costly and potentially catastrophic cyber risks. The portfolio includes solutions for assessment and operations.

**Assessments.** Based on a holistic set of cyber risk objectives, Cyber RiskScope assesses programs, operations, and processes necessary to manage cyber risk, while mapping results and recommendations to the NIST Cybersecurity Framework and ISO-27000. Cyber RiskScope assessments include:

- **SelfAssure:** intuitive online cyber risk management tool that delivers actionable recommendations for reducing cyber risk
- **QuickLook:** executive-level collaborative cyber risk assessment, including a client-specific business impact assessment
- **DeepDive:** customized, comprehensive, fully validated cyber risk assessment that addresses cyber risk programs, operations, and processes for the highest level of assurance

**Operations:** Because it's critical to be aware of cyber threats targeting small and mid-sized businesses, Dynetics offers:

- **NetAlert:** affordable cyber threat monitoring and alerting to quickly identify and eliminate cyber threats

Traditional cybersecurity can't be counted on to prevent cyber incidents. In the Digital Frontier, **resilience must be the goal.**

Dynetics' 75-acre R&D campus in Huntsville, Alabama

## A 40-year heritage of detecting and attacking threats

Dynetics has spent more than 40 years in analyzing complex threats and developing ways to defeat them. It's part of our DNA to use a proven systems engineering approach to addressing threats – it's a disciplined process to creating solutions that differentiates us from most companies offering IT and cybersecurity solutions.

Our commercial IT experience began in the 1990s with regional telecom companies to whom we provided (and still do provide) information systems security engineering. We also began designing and securing carrier-class networks for those companies – experience that is key to our deep cyber expertise.

**We understand how to secure information systems because we build secure information systems.**

Today, Dynetics offers a comprehensive portfolio of cyber risk management solutions for customers in defense and intelligence, civilian government, healthcare, utilities, financial, and other industries.

### Dynetics at a glance

Comprehensive design, engineering, and manufacturing company

Serves defense/intelligence, civilian government, utilities, financial, automotive, and other critical infrastructure sectors

Established in 1974

1,500 employee-owners

Approximately \$300 million revenue

75-acre R&D campus

10 locations throughout U.S.
